

Next-Generation Cytogenomics Symposium Communication Details:

Email Message:

We wanted to inform you of this upcoming event featuring leading experts from top institutions including MD Anderson, NHS Lothian, Columbia University, UZ Leuven, Penn State, Institut Curie, Stanford, and many more.

Bionano's Next-Generation Cytogenomics Symposium is a series of five events beginning Monday, January 11, 2021 at 3:00pm GMT daily. Each session will cover the study of genomic variants involved in a specific topic such as genetic disease, heme malignancies, solid tumors, repeat expansions and contractions, and COVID-19 host genetics. You will have the ability to choose the days and times which align with your interest and availability.

The presentations center around data generated with Bionano's Saphyr system for optical genome mapping and will cover discovery research, clinical research, and clinical validation studies. Each session will end with a live Q&A and panel discussion with the speakers on the clinical implementation of Next-Generation Cytogenomics.
