

WEBINAR

Advancing epigenomics with CUT&RUN: tips, tricks, and best practices

11AM - 12 PM Eastern on [Zoom](#)

Wednesday, April 9th, 2025

Speaker: Hannah Devens, PhD

EpiCypher Technical Support and Sales Scientist

The location of histone post-translational modifications and chromatin-associated proteins within the genome is an important consideration for many researchers. Today, there are many assays available to map how this landscape shifts in disease states or in response to treatment—but which is the best one for your lab? In this seminar, we will explore CUT&RUN, a revolutionary epigenomic mapping tool that is quickly replacing ChIP-Seq for understanding the role of the epigenome in scientific research. Whether you're a current CUT&RUN researcher looking to improve your experimental outcomes, a ChIP-Seq expert interested in new technologies, or a new user curious about how CUT&RUN can be used to profile your favorite epigenetic targets, this webinar will set you on the path to success!
