DAR’s Quality Assurance & Diagnostic laboratory is a hidden gem of a resource for animal researchers on campus. The ability to create custom assays to meet study specific needs is a common request of our researchers. In response, the DAR QA & DX Lab has recently acquired an Alfa Wassermann Vet Axcel clinical chemistry analyzer. The instrument’s open reagent system can run a broad range of reagents from an extensive test menu consisting of cardiovascular, diabetes, renal, liver, toxicology, and immunology specialty assays. With the ability to run 285 tests per hour, the unit provides cost effective, fast, accurate results with low sample volume requirements. Pricing is competitive and on a sliding scale dependent on the number of samples tested. For more information please contact dar.qa.lab@emory.edu
